

ABSTRACT

"Thrombosis diagnosis/prognosis method"

BIOMERIEUX S.A.

- 5 The invention relates to an in vitro method for the diagnosis/prognosis of thrombosis, comprising the following steps:
- A – the nucleic material is extracted from a biological sample,
 - B – at least one pair of amplification primers is used to obtain amplicons of
at least one target sequence of the nucleic material,
 - 10 C – at least one detection probe is used to detect the presence of said
amplicons,
- characterized in that, in step B, said pair of primers comprises at least one amplification primer comprising at least 10 nucleotide units of a nucleotide sequence chosen from SEQ ID Nos. 1; 3 to 8, 15 and 16.
